

Test Services

Test and Re-Test and begin again...

Mobizent provides testing services on all its system integration projects where the customer requires customization or new development on their enterprise solution, which includes an iterative approach of testing, an Independent approach to the team and Quality Team support to ensure a full approach to completed software.

Mobizent brings together comprehensive testing services, experienced delivery, focused technology capabilities and intelligent tools to drive quality, speed and automation to testing.

In our service offerings, Mobizent provides the entire scope and depth of a testing strategy and delivery services, from core to customized to cloud, across a broad array of applications, delivered under flexible business arrangements. Mobizent provides this level of testing on our own software, but also provides these processes as a service to other organizations. Our testing services include:

Discovery and Strategy - Based on an analysis of the software, Mobizent provide end-to-end testing assessment processes from initial planning through final determination. We help assess your organizations' current quality levels and develop a schedule to improve it overtime.

Automation - Mobizent offers a set of intelligent tools and technical assets to consistently support the entire range of available automation-related testing activities and drive to reduced costs and improved speed and quality.

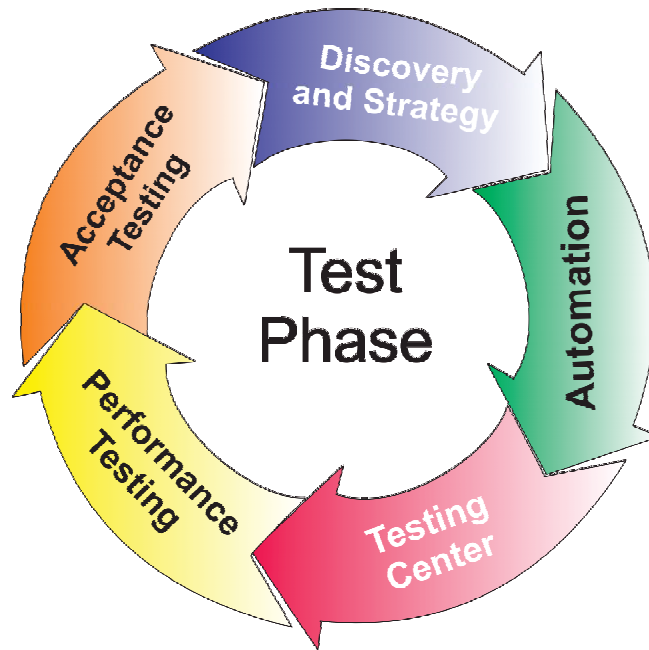

Performance Engineering and Testing - Mobizent conducts a wide range of performance tests and performance engineering services to diagnose, determine and improve the code and architecture that may impacts the application usage and acceptability.

Testing Center - Mobizent will help you manage and set up a dedicated Testing Center either at the enterprise level or within specific business groups, thereby enabling delivery

of standardized and industrialized testing services that effectively combines our resources, formal processes, available tools and reusable modules/software.

Testing as a Service - Mobizent delivers a flexible, at-request suite of testing tools and customized environments built on the Mobizent Cloud Platform that can be allocated dynamically and repeated to enable consistent testing practices.

Digital testing - Mobizent offers a wide range of processes and innovative tools for developing applications to industrialize and accelerate testing services across the discovery and development life cycle from innovation and strategy through to detailed design and implementation.

Benefits -Mobizent Application Testing Services can help you deliver benefits such as:

- Up to 50 percent reduction in test operations costs
- 30-50 percent productivity improvements
- Up to 90 percent reduction in critical defects reaching production
- Improved application and environment stability
- Up to 90 percent automation penetration depending on business process complexity
- Greater staffing flexibility with a extensive delivery model
- Up to 15 percent savings when using 1: many testing 'solution factories'
- Up to 45 percent reduction in test delivery cost when leveraging cloud-based services
- Up to 50 percent accelerated speed-to-market when using an flexible delivery model
